The ScienceCampus CHRONIC INFLAMMATION

Understanding the causes of chronic inflammatory diseases is our aim. Scientists and clinicians of different disciplines work together to investigate similarities and differences of chronic inflammatory diseases e.g. of the joints, the gut, the skin or the brain. Therapies are developed jointly. The ScienceCampus Chronic Inflammation is an initiative of the German Rheumatism Research Center Berlin (DRFZ) and the Charité-Universitätsmedizin Berlin, co-funded by the Leibniz Association.

WELCOME

LEIBNIZ SUMMER SCHOOL ON CHRONIC INFLAMMATION 2019

The ScienceCampus Chronic Inflammation is pointing to the problems of transferring concepts of chronic inflammatory diseases from one to another. Educating young academic researchers as aspiring translational researchers is a major step in creating a connection between the disciplines and specialties to connect ideas and concepts.

You will obtain insight into established concepts of chronic inflammation, and even more importantly, you will learn how to change the point of view to become a successful translational researcher yourself with the abilities to connect different clinical and scientific concepts to develop new treatment strategies.

The goal is to integrate persons in the clinical and scientific activities and to encourage a perspective beyond professional borders. We want to fuel the debate about the impact and quality of biomedical research with focus on chronic inflammation.

PROGRAM

2 DAYS OF INTERDISCIPLINARY TRAINING FOCUSING

- Rheumatology
- Dermatology
- Gastroenterology
- Neurology

with

- Clinical rounds
- Problem based learning (POL) sessions
- Design thinking
- Data mining
- Poster session

APPLICATIONS & INFORMATION

PARTICIPATION

The target audience of the Leibniz Summer School of Chronic Inflammation are basic scientist and young medical academics.

Please send your application (motivation letter, abstract and CV) by April 15 to Katrin Moser (moser@drfz.de).
